Tejashwini S

Final-Year Computer Science Engineering Student
Kolar, Karnataka | +91 9380288236 | teju84531@gmail.com
LinkedIn | GitHub

PROFESSIONAL SUMMARY

Final-year Computer Science Engineering student with hands-on experience in Python, C/C++, and Flutter, including an AI-integrated resume tool and team projects applying machine learning and NLP to real-world problems. Strong team collaborator and clear communicator.

EDUCATION

Dr. T. Thimmaiah Institute of Technology (VTU) Kolar, Karnataka
Bachelor of Engineering, Computer Science & Engineering — Final Year (7th Semester), Expected 2027
CGPA: 7.31 | PUC (Class XII): 79.17% | SSLC (Class X): 79.68%

TECHNICAL SKILLS

Languages: C, C++, Python
Currently Learning: Java, Data Structures & Algorithms
Developer Tools: Git, GitHub, Netlify, VS Code
Core Computer Science: Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

PROJECTS

AI-Powered Resume Analyzer & Builder
Personal Project | Flutter, OpenAI API (LLM/NLP), Regex, Rule-Based Scoring

- Built a Flutter app using OpenAI's language model to analyze resumes against job descriptions and generate improved content, job recommendations, and interview questions.
- Designed a rule-based ATS scoring engine with weighted keyword matching, plus regex-based extraction of technical, communication, and confidence scores from AI interview feedback.

AI-Powered Movie & OTT Recommendation System Using Script Understanding
Team Project (5 members) | Python, NLP, BERT/Sentence-BERT, Cosine Similarity, Clustering

- Built the preprocessing and feature-extraction stage, converting movie/series script text into Sentence-BERT embeddings that capture plot and themes.
- Helped apply cosine similarity and clustering to generate context-aware recommendations; presented the system architecture at the team demo.

YieldCraft AI — Smart Crop Planning, Prediction & Profit Optimization Platform
Team Project | Python, Pandas, NumPy, Scikit-learn, XGBoost, Random Forest

- Contributed to an AI crop planning platform recommending crops and irrigation/fertilizer plans from soil and environmental data.
- Team delivered four ML modules (crop, yield, fertilizer, irrigation) using classification and regression models; assisted with preprocessing and model evaluation.

AI-Powered Email Security Platform — Threat Detection Module
Hackathon Team Project | Python, XGBoost, DistilRoBERTa, NLP, Rule-Based Detection

- Built the Threat Detection module of the team's AI-powered email security platform to catch phishing emails that do not look obviously suspicious.
- Combined XGBoost (header analysis), DistilRoBERTa (subject/body language), and rule-based checks (risky URLs, urgency, sensitive-info requests) into a threat probability and final classification; deployed as a live prototype (email-detector-wcy4.onrender.com).
